

It is no secret that technology is *rapidly* changing. Part of the value we add is to accurately advise our customers, and to help plan for these changes when we design a system.

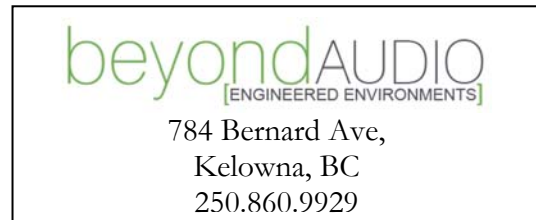

We have spent much of the past couple of months in training classes, talking with major suppliers, and engineering the wiring infrastructure we will be using to make your system as future proof as is practical.

When looking through the documentation we will be sending with your system details and costs, keep in mind that much of the electronics will change before your suite is ready, and are included for budgetary and system design purposes. Revisions are inevitable, and will of course be done with your full involvement every step of the way.

Better looking in-wall and in-ceiling speakers are now available from Sonance. Elegant, modern style with outstanding audio performance. If any of these appeal to you please give us a call to discuss the options.

From simple to sophisticated, Crestron starts as a complete, integrated audio distribution system, but **offers the expandability and connectivity of Crestron Total Home Technology**. Add Crestron touch panels, lighting and thermostats at any time.

Whether as a stand-alone system or a part of a larger custom home solution, Crestron offers simple installation and an enhanced user experience. No other audio distribution system provides the flexibility and expandability of Crestron.

For its usability, reliability and flexibility we recommend Crestron Control in your Madison unit. There is nothing better. Please visit their website for additional information.

Hide Your Television

There are many options we can provide to hide Televisions. Artwork that hides the TV and rolls up, out of the way to reveal the TV, motorized lift systems that hide the TV inside furniture, or drop the TV from a hidden panel in the ceiling.

These and other options can be found here: <http://www.auton.com/>

Imagine walking into your home and, with the push of a button, the painting in the great room slides up revealing a 50" flat screen plasma TV!

Choose from hundreds of pieces of art to find the perfect one that matches your taste and select your frame from a variety of choices.

An extensive art library and frame options can be found at www.vutec.com/artscreen_systems

ONE REMOTE CONTROL

Is your coffee table littered with remote controls? And somehow, you never can seem to find the right one – and if you do, it's difficult to use? We have the solution for you.

It is so easy to use that instructions are actually printed right on the remote, no manual needed. And it even lights up, so you can see it when you are likely to be actually using the system – in the evening, or in a darkened room.
