

## **Beyond Audio**

### ***Letter of Recommendation***

**Beyond Audio** did all of the audio / visual work in our home at 274 Knightsbridge Way in Kelowna. This includes the original wiring (2004) throughout the house and a number upgrades since then. The most recent was a new projector and high definition DVD player for our theatre room in March 2013.

The overall scope of our system is very detailed and involved. We have one location for our sound system in our downstairs theatre room, which is then distributed throughout our home through a Nexus distribution system, controlled with wall panels in each room and remote controls. It is simple to use and very convenient. We have built-in speakers in most rooms as well as outside. Through the Nexus system we can have a variety of audio/video sources - music / TV / movies playing separately in different rooms of our home all at the same time.

The installation work was very clean and professional. The installers are extremely knowledgeable and fast. In addition, they always clean up after themselves and are sensitive to their surroundings.

Mike has been very informative when we inquire about upgrading. He and his staff know their stuff and their pricing has been very competitive. Whenever I call Mike has all the information on our system in front of him.

I know there are a lot of competitor companies out there. The best recommendation that I can give is that we always call Mike at Beyond Audio back when we need something new or something changed.
